engine v0.1.0

Topic:

engine.events.v1

OVERVIEW

What this is

ENGINE

Generic Validation & Correction Engine – the metadata compliance engine behind CIP, DIP, HeyRoya and Kataloghub.

WHAT IT DOES

Detects and corrects the metadata defects that block a music catalog from CWR submission – across 8 issue types – and scores CWR readiness 0-100.

INPUT

A catalog CSV (title, name, role, share %, IPI, society, ISWC, ISRC) and, for correction, a publisher-decision worksheet.

OUTPUT

A health score + issue list, a corrected/cleaned catalog CSV, and a branded health report – plus the telemetry in this run report.

WHY IT MATTERS

Unclean metadata is the #1 cause of rejected CWR filings and mis-routed royalties. This report is generated from real engine runs on real catalogs – the numbers below are measured, not illustrative – so the engine's behaviour is observable, traceable, and auditable end to end.

SECTION 1

Executive Summary

metadata_validationCOMPLETED

RunId	RUN-VAL
TraceId	cbc77e1872304711
Definition	test-15-mixed.csv
Engine	v0.1.0
Steps	4
Total Duration	2ms
Critical Path	0ms (linear chain)
Retries	0

catalog_correctionCOMPLETED

RunId	RUN-CORR
TraceId	bf1e3d3f05c04b3c
Definition	test-15-mixed.csv
Engine	v0.1.0
Steps	5
Total Duration	3ms
Critical Path	1ms (linear chain)
Retries	0

metadata_validationCOMPLETED

RunId	RUN-BENCH-1500
TraceId	f4b8e4f9f0884192
Definition	benchmark-1500.csv
Engine	v0.1.0
Steps	4
Total Duration	62ms
Critical Path	58ms (linear chain)
